

rhizm

What if blockchain could do something useful?

What if we could contribute to the dilemma of social networks being an unsecure and boring space? We have invented rhizm - a physical smart card with high-end technology and cutting edge design inhaling the spirit of the future - free and decentralized.

a new interaction

Rhizm creates a rhizomatic network, a social sandbox via an all new interaction called intercourse. Every card is unique due to its id in the rhizm blockchain. Meet partners, conduct intercourse and push it to the cloud. Once both partners have done that, the intercourse will be cryptographically verified.

from bare metal to the cloud

At rhizomaticmachines.com you will find all verified intercourses creating a graph that visualizes the diversity and complexity of social interactions. Free your mind and play around with our public API creating your own experience with rhizm. Customize your rhizm and invent unforeseen applications to make the world a better place.
